

Installation
Instructions For:
**Double Bend Shaft
Assembly Gauge**
Code: **GW1024**

The perfect tool for correctly positioning a double bend putter shaft into a putter head to ensure proper loft and lie angle measurements.

Designed to take the guess work out of those difficult double bend putter assembly jobs.

Instructions:

1. Once the shaft has been abraded, epoxy applied and the shaft is in the head, place the putter in the assembly jig.
2. Square the putter face using the pre-marked lines on the base plate.
3. Simply rotate the shaft in the head until everything lines up.
4. Using a loft gauge, make sure the putter is resting squarely in the gauge with the correct loft specification.
5. Leave the assembled putter in the jig until the epoxy has cured.
